

**Winemaker:** Yann Bertrand

**Region:** Beaujolais

**Location:** Fleurie

# Cuvee du Chaos

GUY, ANNICK ET YANN BERTRAND

**Appellation:** AOC Fleurie

**Varietals:** 100% Gamay Noir

**Age of the vines:**

45-70 years old

**Farming:** Biodynamic farming, certified organic

**Vinification:** Clusters are hand harvested, then go through a cold carbonic maceration for 20 to 22 days avoiding any manipulations. No added sulfites and exclusively indigenous yeast.

**Aging:** 8 months; 50% in 600 liter demi-muids, 25% in 300 liter barrels, 25% in 225 liter barrels. Racked and bottled at the property without filtration or added sulfites and in harmony with the lunar cycle. Minimum 10 months bottle aging before release.

**Vineyard/Terroir:** 2 hectares in 2 parcels. Primarily decomposed granite and sand, this poor, acidic soil allows for concentrated wines. Vines have been grown biodynamically since 2012. Bush trained according to the lunar calendar to aid vine regeneration. Native cover crops are grown and tilled into the soil every other year to aid soil health. A blend of plants is used for vine treatments (nettle, buckthorn, etc.).

**About the winemaker:** Growing up in Fleurie, Yann Bertrand never thought he would become a winemaker. After attending university he traveled around the French Alps for a few years. He soon found himself working at wine bars and wine shops, surrounded by passionate wine geeks and artisan winemakers who often came to deliver wine themselves. He eventually decided that the metier of a winemaker would be interesting to him if he pursued it with the same passion as the role models he encountered. Returning to the Beaujolais, Yann began to learn from the incredible circle of producers that he never knew before, including well-known people like Jean Foillard and Yvon Metras. All of the vines are farmed organically and located in a single 7.5 hectare block known as Grand Pré. Thanks to incredible farming and knack for Gamay, Yann Bertrand has justifiably become one of the most sought-after producers in the region.
